

YSU Determine Computer's Domain and Name Guide

Mac OS X 10.5.x and 10.6.x versions

Created by: B. Amoline

Date: 6/18/2012

Required Items:

- YSU-owned Mac
- Mac OS X operating system 10.5.x (Leopard) or 10.6.x (Snow Leopard)
- Connected either to the YSU wireless or connected with an Ethernet cable to the wired network

Step 1: Locate the magnifying glass in the upper right corner and left-click on it

Step 2: Type "Directory Utility" into the Spotlight search field

NOTE: If you have Spotlight search disabled, you will need to manually locate it using finder.

10.5 (Leopard): */Applications/Utilities*

10.6 (Snow Leopard): */System/Library/CoreServices*

Step 3: Locate the Directory Utility Icon and click it

Step 4: In the Directory Utility, locate the ysu.local Active Directory Domain. If your Mac is one the domain it will have this address
